Root Cause Analysis

Root Cause Analysis

Issue Selected: Contact Page Does Not Open

During testing, the Contact page failed to open when the Contact option was selected from the navigation menu. This issue prevents users from accessing contact information and reaching the organization. The most likely cause is a broken route configuration, incorrect URL mapping, or a missing page component in the frontend application. Another possibility is that the navigation menu points to an outdated or invalid route.

Browser console logs and network requests should be reviewed to identify whether a 404 error or JavaScript exception occurs. To fix this issue, developers should verify the routing configuration, validate the target URL, and ensure the Contact page component is properly deployed and accessible. Regression testing should be performed after the fix to confirm that all navigation links work correctly.

Testing Summary

Application Tested: RealWorld Demo Application

Testing Type: Manual Functional Testing

Areas Covered:

- Navigation Testing
- UI/UX Testing
- Link Validation
- Page Routing Verification
- Functional Testing

Total Issues Identified: 5

Critical Issues: 0

High Severity Issues: 2

Medium Severity Issues: 2

Low Severity Issues: 1
